It is a useful tool to read emails on multiple websites, such as Gmail, Yahoo!, Hotmail, etc. and use it to read emails. I often find myself having to print a particular document a handful of times to my different printer(s) and then saving the file as a new document to replace the old one on my laptop or desktop computer. What I do is to go to File –> Print –> Send to print that document to a particular printer and then save the new document with a new name. But what if I want to use my mobile phone, tablet or other portable devices to get the same job done? I created a simple program that lets you to do just that. This program also allows you to add/remove printers, specify a file type, number of copies, etc. from your mobile devices. Before you start using the program, it is advisable to first ensure that your device is connected to a PC via a USB cable. If you do so, then the program will appear as a removable disk drive and you can save it as any
