Rapid Network Configurator Free Download For Windows

Rapid Network Configurator is a software that allows you to navigate and switch between networks. The program will help you to:

- Work in 2 or more local networks practically simultaneously, quickly being switched between them by the program
- Keep network settings in the profiles that will allow restoring the kept settings by click of the button in the future.
- Change settings of network connections "on the fly" (without reboot)
- Each kept profile has own tray icon, it means that it is not necessary to activate the program only to receive the representation, what settings are applied now.
- Get know what IP now your network adapter has instantly (move mouse cursor over the tray icon).
- Look through the information on active connections (IP, DNS, Gateway, WINS).
- Copy the information of yours IP address, that allows sending it by e-mail or other messaging service in the further.

Rapid Network Configurator is a software that allows you to navigate and switch between networks. The program will help you to:

Rapid Network Configurator Crack (Updated 2022)

Rapid Network Configurator is a network switching software that allows you to navigate and switch between networks, keeping all connections and settings of the networks. To launch the program just type "Rapid Network Configurator" in the search program or select Start -> Programs -> Rapid Network Configurator. Rapid Network Configurator is not a general network manager, as it is not a software, which is ready to work with routers and other networks' settings. But Rapid Network Configurator is capable to switch between networks in different ways, thanks to the built-in profiles. It is not necessary to go through an installation process, Rapid Network Configurator is supplied with the profiles that allow switching among available connections. It means that Rapid Network Configurator creates the needed profiles on your computer immediately when it is installed. Rapid Network Configurator also lets you to keep your network connection settings that are saved. You can have a set of the profiles that will allow you to switch between networks in one way or another. You can create profiles, which will help you to connect to a network by a specific way or another. It means that your network will be connected to that way or it won't. You can even save your network connections settings into profiles. You can save a network connection into a profile, as a different way to connect to a network. You can use all the settings stored in the profiles on demand. You can also get information about active connections, such as IP, Gateway, WINS, etc. And you can display and change your computer's IP address. If you find that there is a bug in Rapid Network Configurator, you can send us a suggestion or a bug report. Rapid Network Configurator Full Version: Rapid Network Configurator will connect to the network and will display all the settings. To connect to the network type the IP address in the first field, the netmask in the second field, and click the Connect button. To save your settings, just click the Save button.
